

- ☐ composer create-project slim/slim-skeleton [directory name]
- ☐ composer require pachico/slim-swoole
- ☐ Start a Swoole HTTP (or WebSocket) Server and send the request events through to the Pachico's Bridge to the Slim App. (request)
- ☐ If using WebSockets add on additional events to handle WebSocket messages. (open, close, message)

# Server Setup with Slim

---

- ☐ **composer create-project slim/slim-skeleton [directory name]**
- ☐ **composer require pachico/slim-swoole**
- ☐ **Start a Swoole HTTP (or WebSocket) Server and send the request events through to the Pachico's Bridge to the Slim App. (request)**
- ☐ **If using WebSockets add on additional events to handle WebSocket messages. (open, close, message)**

**Demo**
